

AUTOMATIC NITRATE REMOVAL SYSTEM

Nitrates are a common contaminant in areas of agricultural production, as they can enter the water supplies through animal wastes, fertilizers, and industrial waste.

Nitrates can produce health issues such as preterm births, blue baby syndrome, and certain cancers.

Our nitrate removal systems use a specially designed resin to reduce nitrates to safer levels.

These systems include an automatic control valve, and a brine tank for regenerating the resin.

Model	Flow Rate	Size (mm)	Media (Qty)
ANIT1252/7XX	55 LPM	300 x 1600	60 LT
ANIT1665/7XX	90 LPM	400 x 1925	110 LT

Information on larger systems are available on request

Note: Customer to select 742 (Timer) or 762 (Microprocessor)
